

### S2S SMARTSHOT ACOUSTIC FLUID LEVEL INSTRUMENT

A revolutionary re-design of the traditional acoustic well sounder. Voice recognition and audio feedback allow the user a more efficient and accurate process to conduct fluid level measurements.

NR-Tec Ltd. has revolutionized the acoustic well sounder to incorporate the latest available technologies. This has resulted in a highly efficient and accurate instrument that requires little operator input or interpretation.

The compact design, wireless Bluetooth™ connectivity, quick connect wellhead connection, and voice recognition / audio feedback features have all combined to make this instrument the most efficient and accurate well sounder on the market.

The S2S SMARTSHOT has revolutionized acoustic fluid level measurements and made accurate results available to all users.

- Wireless Bluetooth™ connection
- Audio feedback of results immediately after shot
- Voice recognition for results and audio notes
- CSA and ABSA
- 3000 psi / 21000 kPa pressure rating

# The solution to a problem you didn't know you have!

## FLUID LEVEL TEST RESULTS AT THE PUSH OF A BUTTON

The SMARTSHOT solution brings accurate results to the user without requiring years of experience interpreting acoustic data.

### SMARTSHOT FEATURES

- EASY TO USE
- ACCURATE RESULTS
- EFFICIENT OPERATION
- COMPACT DESIGN
- WIRELESS COMMUNICATION

Following in the footsteps of the industry leading S2S (Surface to Sandface) Logger, the new and revolutionary SMARTSHOT Fluid Level Instrument changes the playing field for fluid level data acquisition. This new technology enhances accuracy in the interpretation of collar counts and improves efficiency in obtaining fluid level measurements.

## “the answer for all of your fluid level measurement requirements”

### EFFICIENT AND ACCURATE

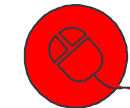

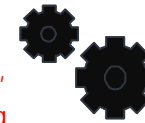

Our proprietary SMARTSHOT Technology and Wizard APP ensure efficiency and accuracy when obtaining fluid level measurements. Voice recognition and audio feedback voice synthesis allow the operator to interface with the software in a highly efficient manner. Once the shot is taken it is automatically downloaded and analyzed – the results and shot quality are provided to the operator via Bluetooth™ headset (or using the computer / laptop speakers).

### EASY AND COMPACT

The SMARTSHOT Instrument Is equipped with a quick connect wellhead attachment and fluid level data acquisition is obtained at the push of a button. The software does the rest and provides immediate results.

The dimensions of the main body are: 5.0" wide X 4.75" high X 6.0" long.

Multiple choices for shot generation (N2 cartridge, N2 Supply, or decompression).

### CUSTOM SOLUTIONS

Contact NR-Tec Ltd. for all of your optimization, engineering, and fluid level instrumentation requirements.

### SOFTWARE SOLUTIONS

The CDI (Communication and Data Interface) software provided with the instrument automates the processing and interpretation of data. It provides the expertise required to accurately interpret fluid level data.

### ENGINEERING SOLUTIONS

Once you have obtained your fluid level measurements NR-Tec Ltd. has a full suite of engineering reporting, including AER required reports and PAS files. Contact us for more information on these services.
